- What data is produced during a site investigation
- Information management at SKB
- Requirements
- QA and QC in Site investigations
- Data management processes in Site investigations
- Data management organisation in Site investigations
- Architecture and capabilities of SKB Data management systems
- Future opportunities
- Implementation of a data management system. A possible approach.
- System demonstration of SICADA database
- System demonstration of SKB GIS

Course structure

Participants will be invited to a web-based course portal.

Instructions on how to use the course portal will be sent out to participants prior to course start.

The participants can freely watch and listen to pre-recorded presentations during the time the course is open.

Questions and discussions can, during the course, be started and completed through the course portal. SKB's experts will respond via the course portal.

Four webinars will be held, with the opportunity to ask questions and engage in discussions with experts from SKBI and SKB.

Participant profile

The digital online training is aimed at employees or consultants in the nuclear waste sector and managing or are involved in information and data management. You may be relatively new to the field or you have a few years of experience.

The presentations are designed to provide both overall theoretical background and detailed knowledge. Depending on the participants backgrounds and experiences, it is possible to focus on different parts of the course.
